OUTPUTS

FIRE BEHAVIOR

GENERAL

The fire is primarily burning in a mix of grass, grassy-oaks, and brush. The fire is starting to burn into larger pockets of beetle killed trees, especially to the south and eastern areas of the fire. These areas will create additional spotting issues and a large dead and down component ready for consumption. We are in a persistent forecast and should see burning conditions similar to the last few days. The fire has, and can travel 4-6 miles a day to the south-east.

Optimal Alignment, Peak Burning Conditions

Probability of Ignition = 100% Spotting Distance = up to 1/2 Mi. ROS 2 - 2.5 mph
Fine Dead Fuel Moisture = 2% 10hr Fuels = 4-5% Flame Lengths 25 feet plus

Average Conditions

ROS: Grass .1-3/4 mph, Brush .1-1/2 mph Flame Length: Grass 1.5-6 feet Brush 2-14 feet

SPECIFIC

BRANCH I

Fire will primarily be flanking with possible flare ups with influence of terrain and variable winds when not on ridges. Fire will be burning in small patches of brush and mostly grassy oaks

BRANCH II

Fire will primarily be backing down to Lake McClure and have unburned islands burning.

Branch III

The fire will be terrain driven as it works its way North towards Coulterville. Be cautious on the bottom third of the slope as wind will be terrain driven and may eddy around bends in the river.

Branch IV:

Fire is working its way East Following the N. Fork of the Merced River. Fire will primarily be flanking and terrain driven.

Branch V

Fire will be lined up with Sherlock Creek and to a lesser extent the Merced River as it follows terrain and where it is lined up with the prevailing North wind. Head and flanking fire will be common. As the fire works South and East the fire will be in tree mortality areas

Branch VI

A series of ridges and drainages are lined up with the North wind and will want to push head fire to the South

AIR OPERATIONS

Expect the smoke and inversion layer early to mid-morning

CULTURAL MESSAGE

On this Fire, there are a significant amount of both prehistoric archeological sites and historical sites. The prehistoric sites could range from small rock outcrops with seed processing mortars or slicks to large seasonal camps. These could include more features like bedrock milling locations, midden soil (dark black colored soil), lithic scatters, and other surface artifacts.

There are a variety of historic sites as well. The most common are mining sites, historic camps, and railroad grades (mostly down near the Merced River). There could be metal can dumps, cement pads, mining equipment, glass, ceramics, and other debris.

*****Be Careful if you encounter a former Mine in the Field*****

They pose environmental as well as physical dangers!

There could be only partially covered open vertical shafts. Be careful working in these areas. There also could be chemical residues that could be harmful. Stay away if possible.

If you find any prehistoric or historic site, contact Herb Dallas at (951) 840-0004. Take a GPS point if possible or mark its location on a map. Report any mining hazards to the Situational Unit Leader. Flag the location in the field as well, if you feel it poses a danger to other field personnel. Take a GPS point.
